Reiner

The English mathematician William SHANKS calculated the value of π to 707 places. It took him fifteen years to do so.

In 1949, the first electronic computers calculated it to 2,035 places in three days - and found that SHANKS had made a mistake in the last 100 or so figures in his table which were

wing.

1873

The Japanese adapted the
Gregorian Cal. during the
Westernization period of their
MEiji emperors.
